

HOLTER CONNECT

A complete cloud-based clinical Holter ECG analysis and reporting solution

LifeSignals™ Holter Connect™

LifeSignals Holter Connect is a complete end-to-end system that enables hospitals and specialist clinics to operate a cloud-based Holter Test reporting solution.

- The LifeSignals Wearable Biosensor* enables the continuous collection and upload of up to seven days of two-channel ECG and Heart Rate data.
- The cloud-based platform is user-friendly, with intuitive data displays and analysis tools enabling fast and efficient analysis of multiple day ECG and Event recordings.
- Patient Holter Test reports can be remotely accessed, reviewed and authorised by the clinical team from any location.
- A certified cardiac reporting service is available and enables facilities to quickly scale up their Holter monitoring capacity to assist in providing more patients with a reliable clinical-grade service.

SOLUTION

WIRELESS

World's first single-use, two-channel ECG wireless Biosensor

FLEXIBLE

Partners and distributors can tailor their own end-to-end Holter Management Solution.

LOW COST & SCALABLE

High volume production to meet growing client and market demands.

SECURE

Compliant cloud server supports robust data security standards

BENEFITS

- Patient reports can be accessed, anytime from any location with internet access.
- User-friendly interface and interactive one-click access to the arrhythmia strips with full ECG data supports faster interpretation and editing.
- High quality reporting with certified cardiac technicians available.
- Pay-per-use model allows flexibility and minimal investment. No servicing or maintenance contracts involved.
- Medical facilities can quickly scale up Holter monitoring services, providing faster service to patients.
- Reduced staff time spent on device preparation and application to patient, required on sterilisation and managing data downloads.

*LifeSignals Biosensors are available for sale pending permission from local respective regulatory authorities.

LIFESIGNALS HOLTER CONNECT

- Cloud-based platform permitting storage and remote access of patient ECG reports.
- Single-use, clinical grade biosensor providing seven days of continuous two-channel ECG data capture.
- Holter reporting service supported by third-party certified cardiac technicians available.
